Disclaimer

This profile arises from self-report questionnaires which may have alterations/variation due to individual's actual level of motivation, interests, experience, values, abilities, skills, mood state etc. than the analysis in the report captured basis the responses shared at the time of testing. The report must be interpreted in the light of corroborating evidence gained during the clinical interview. The findings of this report should be professionally interpreted in the light of other information about the individual. This report may include sensitive information that is likely to be misinterpreted by those without the required training. Authorization for use of this report is limited to the examinee and their designated consultants. Any further use requires the authorization of the examinee or their legal guardian.

Introduction

This report is based on the subject's responses to the IIP Aggression Scale. It provides the respondent's composite score and its description. The composite score and its description provided in this report may be interpreted by a competent Mental Health professional only.

Overview of the test

The IIP Aggression Scale is a 30-item self-report inventory developed to assess aggressive behaviours in adolescents and adults. It is a sound psychometric measure that has been standardized on a sample comprising adolescents and adults.

SAMPLE

Results

TOTAL SCORE	QUALITATIVE DESCRIPTOR
96	High

SAMPLE

Aggression can be defined as behavior aimed at harming others physically or psychologically. Aggressive behaviour creates an unsafe environment for its recipients as well as alienate the aggressor in their social environment. Identifying and working to minimize aggressive behaviours can improve an individual's well being and overall quality of life.

Total Score Interpretation

Overall_High

The respondent's overall score corresponds to "High Aggression." This suggests that they demonstrate a notable inclination towards aggressive behaviours. Their emotional reactions may be stronger and confrontational in nature than average. They face difficulty in expressing anger appropriately often leading to potential outbursts. Their toleration towards frustration is low and may get irritated or angered easily in such situations. They are likely to find emotional regulation challenging and as a result may not be able to deal with negative emotions like anger, frustration, jealousy, etc. effectively. Overall their score corresponds to lower levels of prosocial behaviour and difficulty maintaining positive relations with others.

Item Responses

1	1	2	2	3	0	4	3
5	2	6	1	7	1	8	2
9	4	10	3	11	0	12	3
