Disclaimer

This profile arises from self-report questionnaires which may have alterations/variation due to individual's actual level of motivation, interests, experience, values, abilities, skills, mood state etc. than the analysis in the report captured basis the responses shared at the time of testing. The report must be interpreted in the light of corroborating evidence gained during the clinical interview. The findings of this report should be professionally interpreted in the light of other information about the individual. This report may include sensitive information that is likely to be misinterpreted by those without the required training. Authorization for use of this report is limited to the examinee and their designated consultants. Any further use requires the authorization of the examinee or their legal guardian.

Introduction

This report is based on the subject's responses to the Alcohol Drug and Attitude Scale(ADAS). It provides the respondent's composite score and its description. The composite score and its description provided in this report may be interpreted by a competent Mental Health professional only.

Overview of the test

The Alcohol and Drug Attitude Scale(ADAS) is a 28-item self-report inventory that assesses an adolescent's attitude toward consumption of psychoactive substances. It was developed by Sunil Saini, PhD and Sandeep Singh, PhD in 2010.

Results

TOTAL SCORE	QUALITATIVE DESCRIPTOR
75	Average

Attitude plays an important role in developing both positive and negative behavior. Parents and other significant others influence the attitudes and behavior of adolescents. The consumption of psychoactive substances and associated behaviours are significantly influenced by an individual's attitude toward them. Assessing attitudes can help identify vulnerable individuals and can help guide early interventions.

Total Score Interpretation

Overall_Average

The respondent's score corresponds to "average" on the Attitude towards alcohol and drugs scale. This suggests that the individual holds moderate views towards the consumption of psychoactive substances. They neither strongly endorse nor strongly condemn the consumption of alcohol and other drugs either in personal capacity or as a form of socialisation.

Item Responses

1	1	2	2	3	3	4	4
