SAMPLE

Children's sexual abuse, including sexual assault and rape, is a serious global public health issue, a violation of their human rights, and has a number of serious health repercussions, such as trauma to the mind. Such trauma symptoms frequently appear in children in a variety of ways. Nevertheless, if there aren't any other obvious physical symptoms for which individuals often seek therapy. The effects of psychological stress on children are frequently hidden and poorly understood by the general public.

Total Score Interpretation

Overall_Moderate Impact of Trauma

A "moderate impact of trauma" implies that the traumatic experiences have led to notable and observable changes or disruptions across psychological, emotional, social, behavioral, sexual, or academic domains. These changes are significant enough to impact the individual's functioning and overall quality of life. The disturbing experiences have brought about a moderate level of disruption and change in the individual's life, necessitating attention and potentially interventions to support their well-being and functioning.
