This report may include sensitive information that is likely to be misinterpreted by those without the required training. Authorization for use of this report is limited to the examinee and their designated consultants. Any further use requires the authorization of the examinee or their legal guardian.

## Introduction

This report is based on the subject's responses to the IIP Depression Scale. It provides the respondent's composite score and its description. The composite score and its description provided in this report may be interpreted by a competent Mental Health professional only.

## Overview of the test

The IIP Depression Scale is a 20-item self-report rating inventory that measures the symptoms and attitudes associated with depression. It has been developed by Dr. Kranti K. Srivastava in 2021.

SAMPLE

## Results

TOTAL SCORE	QUALITATIVE DESCRIPTOR
51	Severe level of Depression

SAMPLE

Depression is extreme sadness or despair that lasts more than days. It interferes with the activities of daily life and can cause physical symptoms such as pain, weight loss or gain, sleeping pattern disruptions, or lack of energy. Depression is the most common mental disorder. Fortunately, depression is treatable. A combination of therapy and antidepressant medication can help ensure recovery.

## Total Score Interpretation

### Overall\_Extreme level of Depression

The respondent is experiencing extreme distress due to their depressive symptoms. They require urgent intervention in the form of a diagnostic interview and appropriate treatment modality. The items endorsed by the respondent individually must be carefully probed further in order to assess specific risks and provide short term measures for the same.

SAMPLE

## Item Responses

1	4	2	3	3	2	4	3
5	3	6	4	7	3	8	2
9	2	10	4	11	3	12	2
13	2	14	1	15	2	16	4
17	3	18	2	19	1	20	1
